ONE SYSTEM. ONE TEAM. ONE NUMBER TO CALL.

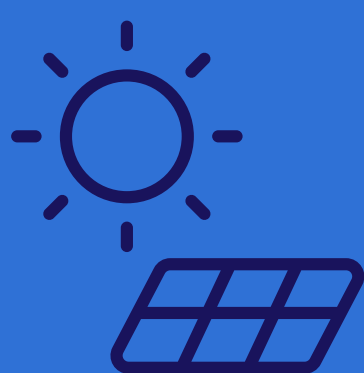

SECURE EVERY PHASE. PROTECT EVERY SITE.

3 Smart Security Features

02

Solar-Powered Surveillance

Deploy protection where there is no permanent power.

01

Theft & Intrusion Protection

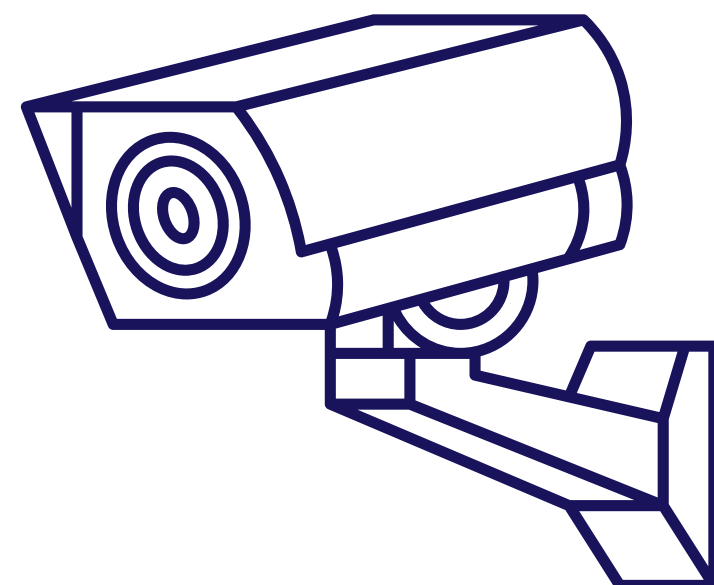

Help protect tools, copper, fuel, equipment and materials.

03

Live Voice-Down & Escalation

Deter intruders instantly and escalate verified threats when required.

Complete Protection for Construction Sites

Construction Sites Don't Stop Being Targets After Hours.

Open sites are constantly changing. Equipment moves, materials arrive, structures go up and temporary access points change. When crews leave for the day, valuable tools, copper, fuel and equipment can be left exposed.

MATERIAL THEFT

Copper, tools, fuel and building materials can disappear overnight.

OPEN PERIMETERS

Temporary fencing, multiple entrances and changing site layouts create security gaps

NO POWER / NO INTERNET

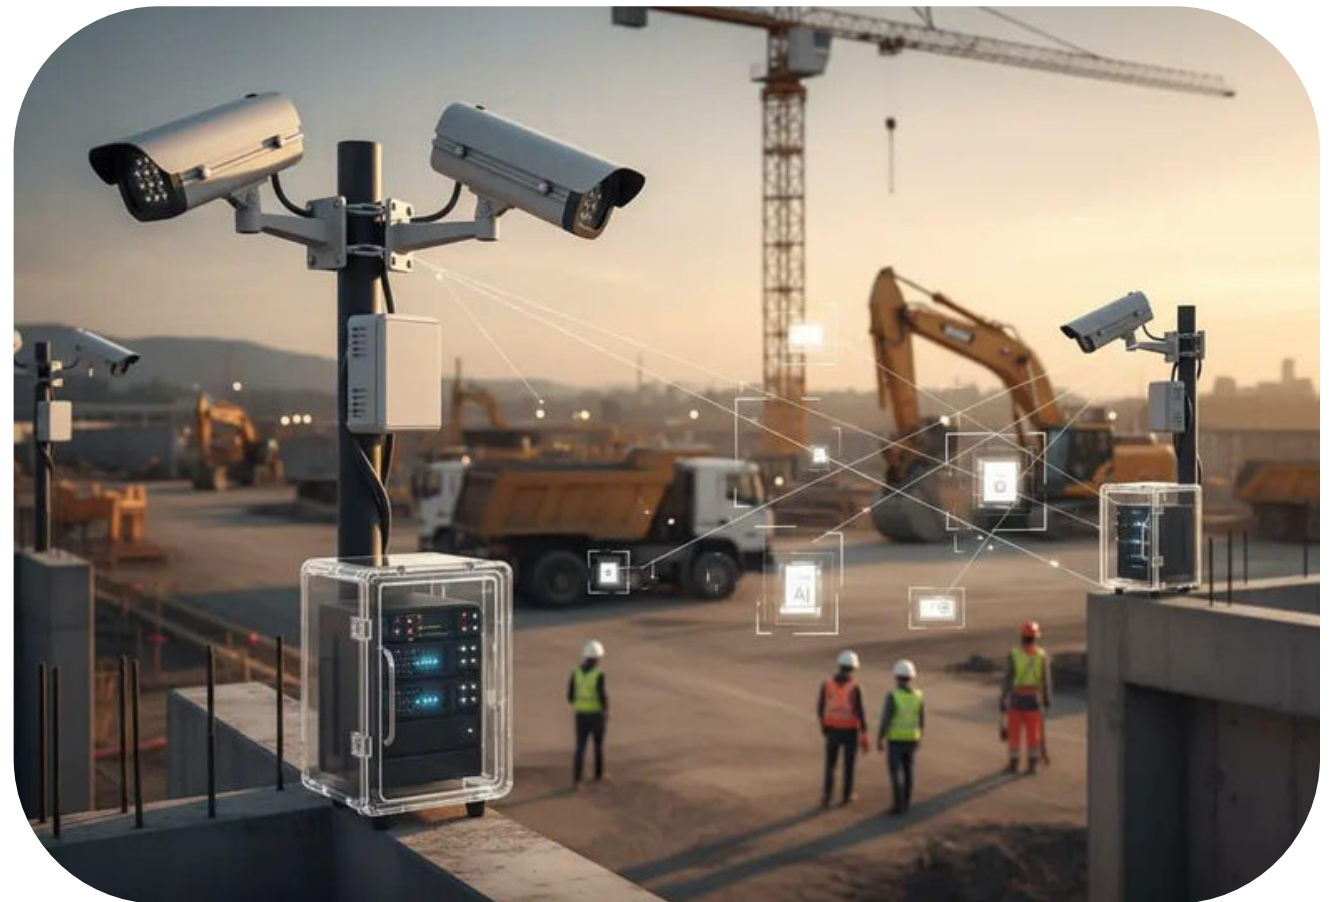

Early-stage sites may not have infrastructure needed for traditional surveillance.

FALSE ALARMS

Basic alarms can detect movement without knowing whether it is a real threat.

One Security System. Built for the Entire Site.

Nexo combines intelligent cameras, mobile surveillance, virtual perimeter protection and live human monitoring into one connected security solution.

01 — SOLAR SURVEILLANCE TOWERS

Security where your site needs it.

Solar-powered mobile surveillance units can be rapidly deployed to locations without existing power or internet infrastructure.

- Solar + Cellular
- Rapid Deployment
- 24/7 Monitoring

Nexo's current material specifically describes mobile surveillance units as solar + cellular and suitable for sites without existing infrastructure

02 — AI SECURITY CAMERAS

See more. Detect smarter.

AI-enabled cameras help identify people, vehicles and activity while reducing unnecessary alerts.

- 4K Video
- Day & Night Coverage
- AI Detection

The existing Nexo content describes 4K cameras, AI detection, facial/license-plate recognition and smart search.

03 — VIRTUAL PERIMETER

Protect the boundary before they reach the building.

Create virtual detection zones around gates, storage areas, equipment yards and site boundaries.

- Tripwire Zones
- Human & Vehicle Detection
- Instant Alerts

This matches Nexo's existing virtual perimeter positioning.

04 — LIVE HUMAN RESPONSE

AI detects. A human verifies.

When a potential threat is detected, Nexo's monitoring team verifies the event and takes action.

- Live Voice-Down
- Threat Verification
- Emergency Escalation

Nexo's existing workflow describes AI detection followed by human verification, voice-down and authority/owner notification.

HOW IT WORKS

From Detection to Response in Seconds.

Your site is monitored around the clock. When activity is detected, Nexo's AI and live monitoring team work together to verify and respond.

01 — DETECT

AI cameras detect movement or activity.

02 — VERIFY

A live monitoring professional reviews the event.

03 — DETER

Two-way audio can be used to warn unwanted visitors.

04 — ESCALATE

Verified threats can be escalated to the appropriate response.

05 — REPORT

Incident footage and details are documented.

WHAT NEXO PROTECTS

Protection That Moves With Your Project.

Construction sites change every week. Your security should adapt with them.

Protect:

TOOLS & EQUIPMENT

Help protect high-value tools and machinery from unauthorized access.

COPPER & MATERIALS

Monitor storage areas and material zones where theft risk is high.

FUEL & GENERATORS

Keep an eye on fuel storage, generators and temporary equipment areas.

SITE PERIMETER

Monitor fencing, gates and vulnerable access points

MATERIAL STORAGE

Create dedicated monitoring zones around valuable construction materials

AFTER-HOURS ACTIVITY

Keep eyes on the site after the crew leaves
